What I want

(1) To predict before it happens

(2) to prevent sudden falls

(3) to record the seizure's.

(4) 90% Accuracy

Resons for it occurance

(1) Missed medication
(2) Messed up sleep schedule
(3) Stress
(4) light
(5) fever

Seizure - single episode
Epilepsy - disorder.

Tonic - Clonic seizures

Date: / /

Q If SUDEP is a concern can wearable devices reduce the risk of SUDEP in those living with epilepsy?

- tonic-clonic seizure
- Alert SOS to 911
- Accuracy - False Positive

Q What should I consider when choosing a wearable device?

- Accuracy Not False Positive ones
- type of seizure
- Not complicated for the user
- A lot of different kind of seizure and use to optimize ~~too~~ it

Q What do wearable devices do?
- record the seizure
- How long
- Let the doctor
- Save the signal data

Q What are some currently wearable devices that are currently available for people living with epilepsy?

- Shaking
- Skin sweat
- Heart rate

- Watches
- Fit band

Q Under what circumstances might someone consider a wearable epilepsy device?
Types of people with seizure
- who doesn't remember when it occured
- the people who live alone (Independent)
- Sleeping

Note:- Sending Information to the care team (one a week or month)
